

U.S. Army TACOM Life Cycle Management Command

Red River Army Depot (RRAD)

Who We Are

Red River Army Depot has a long history of supporting our nation's Soldiers. Since 1941, our focus has been on providing the world's finest military with quality products and services. RRAD's maintenance support to America's Joint Forces and Allies throughout the world continues to exemplify our commitment to provide exceptional materiel readiness and serviceability of equipment.

In order to "Sustain the Strength of the Nation," RRAD employees conduct full spectrum maintenance operations on supported platforms at the Northeast Texas facility. Red River is a Quality ISO 9001:2008, Environmental ISO 14001:2004, and OHSAS 18001:2007 registered industrial complex providing responsive and innovative solutions for the Department of Defense in repair, overhaul, recapitalization, remanufacture, certification and conversion of combat systems and tactical vehicles.

What We Do

Red River is designated as the Center of Industrial and Technical Excellence (CITE) for the Bradley Fighting Vehicle System (BFVS), Tactical Wheeled Vehicles, such as the Mine Resistant Ambush Protected (MRAP) Vehicle and the High Mobility Multipurpose Wheeled Vehicle (HMMWV). RRAD is also the CITE for the Multiple Launch Rocket System (MLRS), the Small Emplacement Excavator (SEE) and Rubber Products.

- During conflicts in Iraq and Afghanistan, more than 45% of the civilians who deployed were from Red River. The RRAD Travel Team

programs are critical to the success and safety of our Soldiers and the Joint Warfighter, supporting them CONUS or OCONUS. These teams can also support our nation's foreign military sales process, ensuring vehicles are delivered fully mission capable (FMC), and providing limited operations and maintenance training.

- RRAD has the only capability within the DoD for remanufacture of road wheel and track. Currently, the depot is the only qualified source of supply for the M1 road wheel.
- Public-Private partnerships support an Army in transformation. RRAD proactively seeks industrial partners and has successfully negotiated over 200 teaming and partnering arrangements. These relationships leverage the strengths of both parties and ultimately do result in a better quality and lower priced product for the war fighter.
- RRAD technical resources include the capability to design, fabricate and manufacture a wide variety of items, to include designation as the fabrication source of the HMMWV Egress-Assistance Trainer (HEAT) and the MRAP Egress Trainer (MET).
- RRAD serves as the primary DoD source for HMMWV Recapitalization with the processes and capacity in place to consistently support 32 vehicles per day on one shift.
